

COVID-19 AND TOBACCO USE

What is COVID-19?

COVID-19 is a lung illness caused by a type of coronavirus.¹ It spreads when someone who is infected coughs or sneezes and the droplets land in the mouths or noses of others nearby.²

COVID-19 and Commercial Tobacco Use

Commercial tobacco use can cause health illnesses like lung injuries. Smokers who already have health injuries like lung disease are more in danger of getting sick with COVID-19.³ Vaping can cause longer times to recover from lung illness.⁴

More families are staying at home together to stop the virus from spreading.

For families who live with a smoker, they are in more danger of breathing secondhand smoke. Secondhand smoke can cause serious illnesses such as lung cancer, asthma, and heart disease.⁵
